

Super Bowl Single-Market Launch – Dev Spec

Execution Model

- Fully Web2
 - Centralized backend and database
 - No smart contracts
 - No blockchain interaction
 - No audits
 - No real money
 - No payments
 - No wallets required (optional later)
- Goal: ship fast, look polished, support virality.

Core Feature Scope

Prediction Market

- Single market only
- Market question: Who will win the Super Bowl?
- Two outcomes only: Team A or Team B
- Each user may place exactly one prediction
- Entire \$10,000 virtual balance applied to that single prediction
- Users cannot split balance
- Users cannot predict both teams
- Prediction is final once confirmed
- Market closes automatically at kickoff time
- Outcome resolved manually after final whistle

User Balance Logic

- Every user credited \$10,000 virtual balance
- Balance is single-use
- Entire balance consumed on prediction
- Balance locked after prediction
- No withdrawals
- No transfers
- No reuse

User Actions

- Sign up
- Select Team A or Team B
- Confirm prediction

- Balance locks
- Mandatory tweet on X
- Optional mock ticket share

Signup & Authentication

- Email signup
- X (Twitter) OAuth signup
- Optional wallet login placeholder

Do not:

- Require minimum followers
- Aggressively block multi-accounts
- Add KYC
- Add heavy bot protection beyond basics

Mandatory Tweet Logic

- Prediction confirmation triggers tweet intent
- Tweet must be posted to proceed
- Tweet content prefilled
- Tweet link stored server-side as proof

Required tweet copy:

I just predicted for a chance to win 2027 Super Bowl tickets

Predict here 📌

Referral Logic

- Each user has a referral link or code
- Referred user must sign up and place their single prediction
- Referrer receives +1 raffle entry
- Optional per-user referral cap configurable

Raffle Logic

- Each correct prediction equals 1 raffle entry
- Referral bonuses add entries
- Entries stored in database
- Winner drawn manually or via script after event
- Prize: 2 Super Bowl tickets for the following year

Leaderboard not required for this launch.

GFX & Social Assets

Website Prediction Banner

- Single neutral banner
- Displayed on prediction page
- Text: Predict the Super Bowl Winner
- Text: Win tickets to the 2027 Super Bowl

Tweet-Ready Prediction Cards

- Two static images, one per finalist team
- Card selected based on user pick
- Text on image: I just predicted for a chance to win 2027 Super Bowl tickets

Optional Mock Ticket Card

- Single generic ticket-style image
- Text: 2027 Super Bowl Ticket Entry
- Used only for optional sharing

UI Requirements

- Single page layout
- Clear primary CTA
- Confirmation state after prediction
- Locked state shown post-prediction
- Simple balance display (\$10,000 to \$0)
- Polished visuals prioritized over depth

Timeline Constraints

- Launch live 10 days before Super Bowl
- Market closes at kickoff
- Winner announced within 24 hours
- Testnet messaging starts immediately after

Hard rule: no more than 7 days between event end and testnet activity.

Explicitly Out of Scope

- Multiple predictions per user
- Split balance
- Odds engines
- Market makers
- Liquidity pools
- On-chain settlement
- Real money handling
- Regulatory compliance flows

Success Metrics

- Total signups
- Predictions placed
- Tweets generated
- Referral-driven signups
- Traffic spikes
- Post-event testnet conversion
